About Me

I'm a self-taught coder living in Chicago. I just finished my MA in philosophy and am now transitioning to work in web development (especially front-end). You can see some of my projects below. Feel free to contact me if you have any questions!

Languages and Technologies I Use

- HTML
- CSS
- JavaScript
- jQuery
- MEAN stack
- Bootstrap
- C
- Github
- and more... like paper.js, howler.js, font awesome, and mongoose

Here are my projects!

Home-ing Network

Designed to crowdsource information on the location of homeless people around ATL.

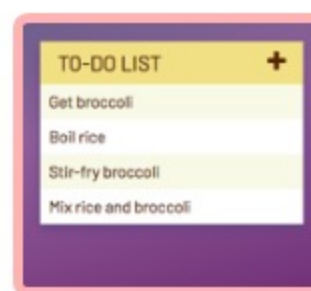

Photo Gallery Webpage

Simple website for displaying photographs that I've taken and images I've edited.

RGB Color Guessing Game

A simple javascript-run game where you guess which square has the correct rgb value.

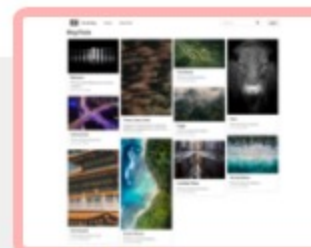

To-Do List

A basic to-do list, focusing mostly on CSS styling with jQuery events.

Tapapat

An interactive sound and animation kit inspired by Patatap. Utilizes paper.js and howler.js. (No mobile support yet)

Mock Blog

A working framework for a standard blog site (MEAN stack). Styled with Semantic UI and masonry.js (for a cascading grid of images.)
